

how to use Sims2pack clean installer

Sims2pack clean installer is a tool for Sims 2™ and all the people who downloads a lot of custom content. S2PCI can be used to categorize, catalog or remove that content. It will also help you in installing your files. You will be able to preview some content before installing. It has a built in unrar and unzip routines, as well as possibility of installing dozens of files with single click.

First download the program.... <http://sims2pack.modthesims2.com/>
Download section then choose the latest version. I've 1.5.1.4 and it's ok. You need Microsoft Framework installed before install S2PCI as tell on the program site.

Now install the program.

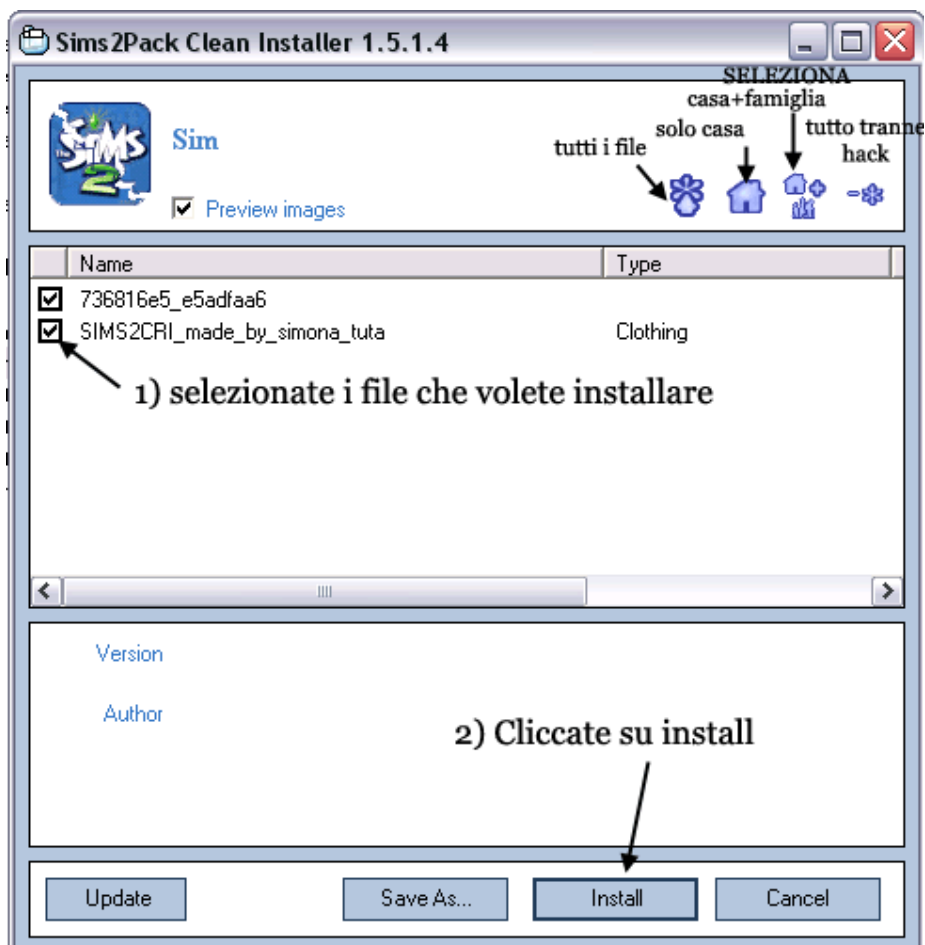

1.1 Install custom content with S2PCI

1.2 Browse Downloads folder

1.3 Move, dolete and deactivate files

1.1 INSTALL CUSTOM CONTENT

Now if you double click on a .sims2pack file will appear this window:

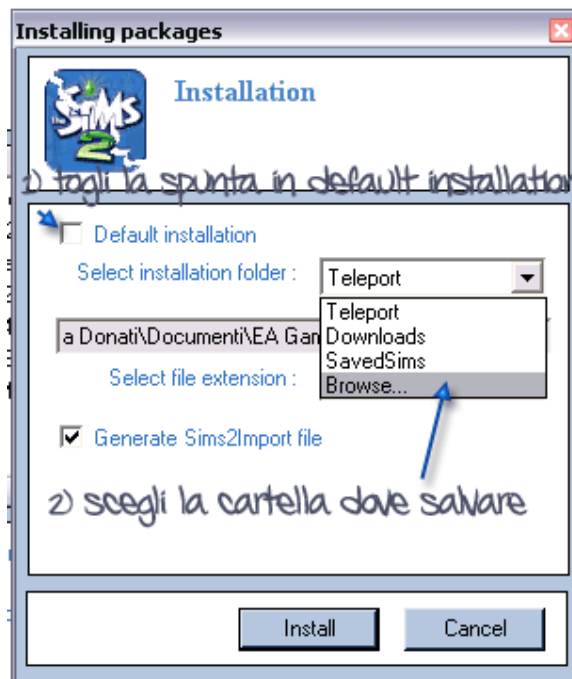

You can choose the file to install. By the icon on the top you can choose if you want all files, only lot file, only lot plus family files, all files except hacks.

You can also choose item by item if you want install or not by clicking on the square at left on every row.

Once your selection is made click on install. Now this mask appear:

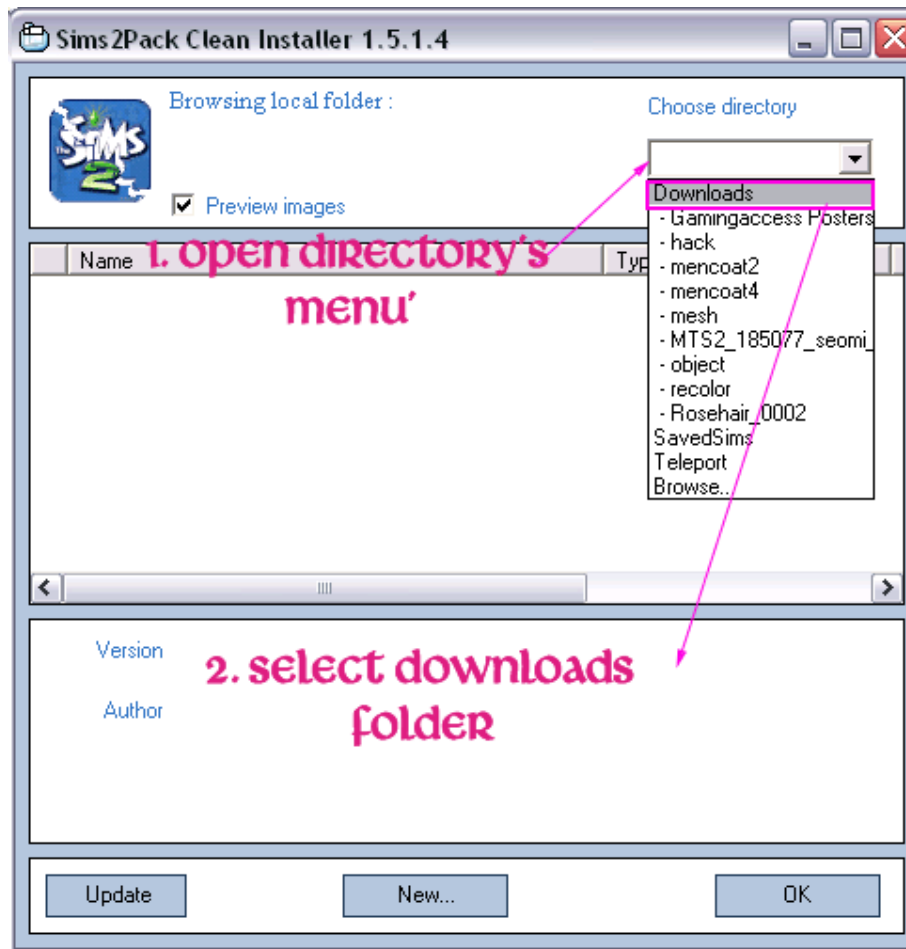

If you don't want install the content in the Download folder but in another directory, remove sign near default installation and select the folder when you want to install it or select browse to find the directory on your computer.

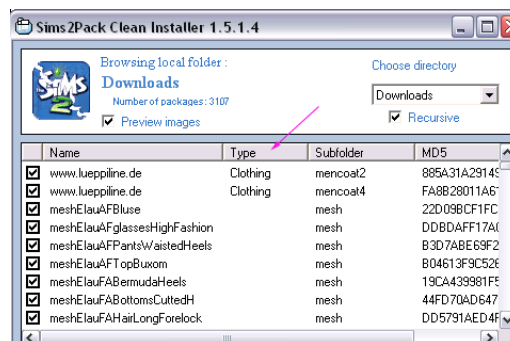

1.2 BROWSE DOWNLOADS FOLDER

Open the program. This is the window that appear. You must click on choose directory. Now select the folder you want to browse.

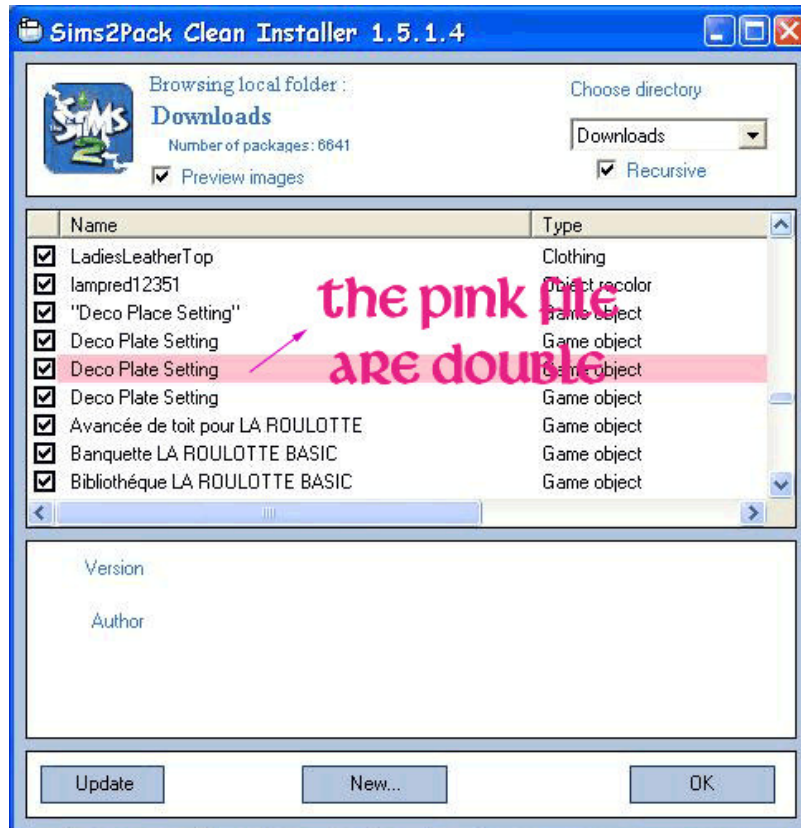

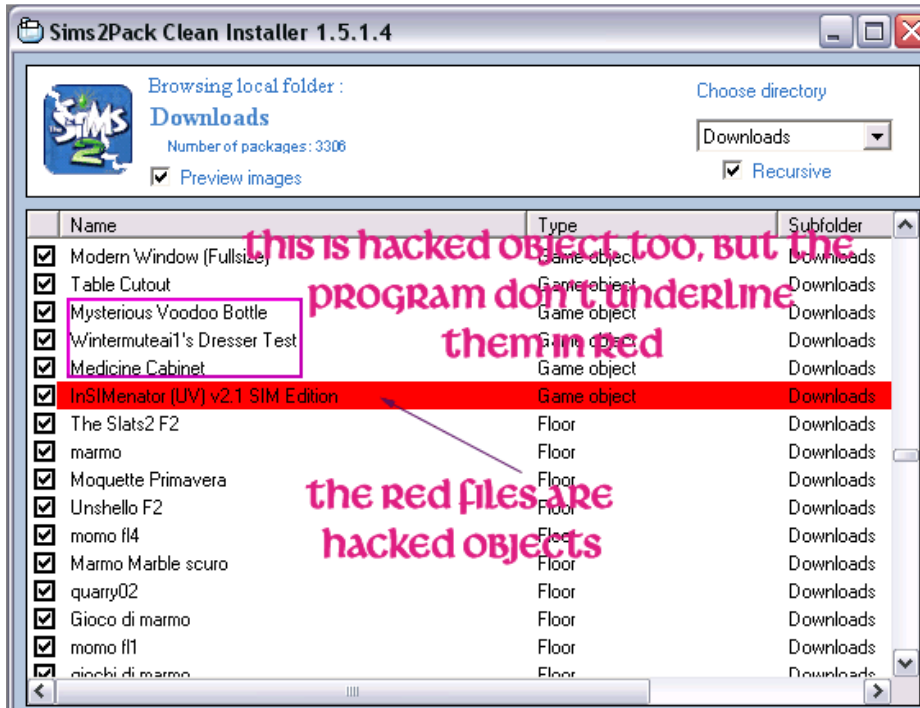

Be patient. The program now load all the content of the folder. The time for load is proportional to the number of file that you have on it.

Just it finish, click on "Type" so the program will order your files pro type.... And you can see hair, clothes, wall, objects... all in succession.

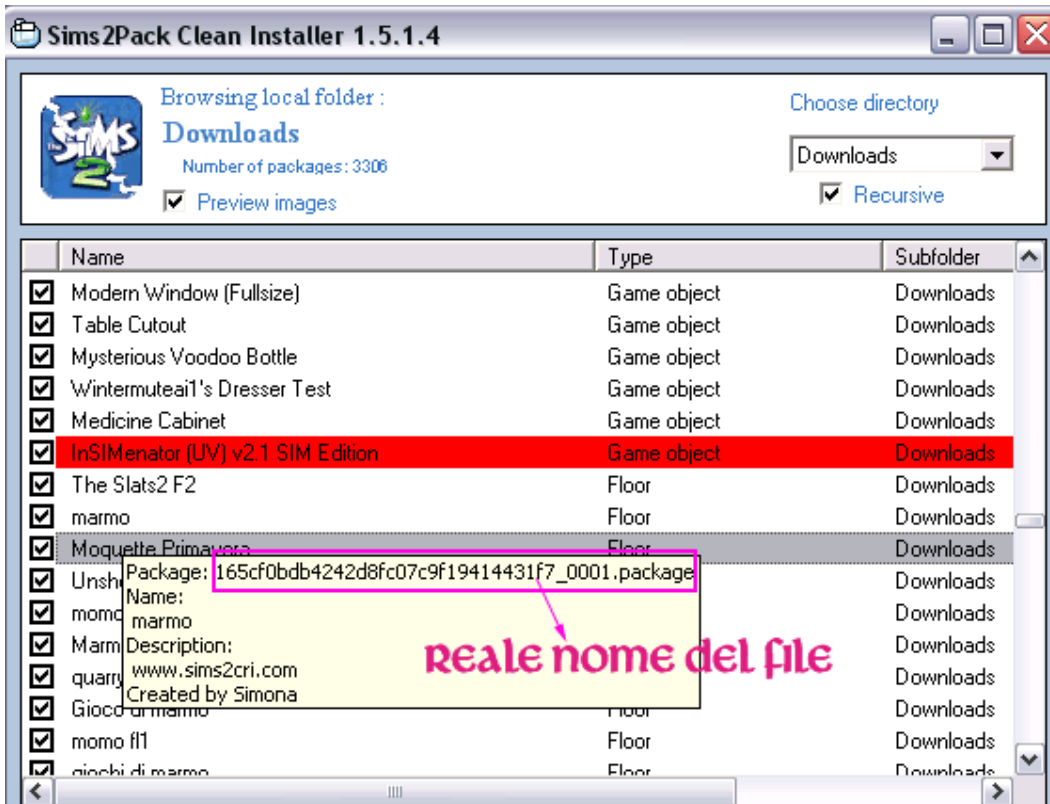

Some file are underline in pink and some in red. What does it mean?

Red underline files are hacked objects (but as you can see in the image not all hacked objects are underline), or career, or major... all files that modify the game.
 Pink underline files are double files. Sometimes when you install a characters or a lot in that there is a file that you have in your folder but with a different name, so the files has been duplicated.

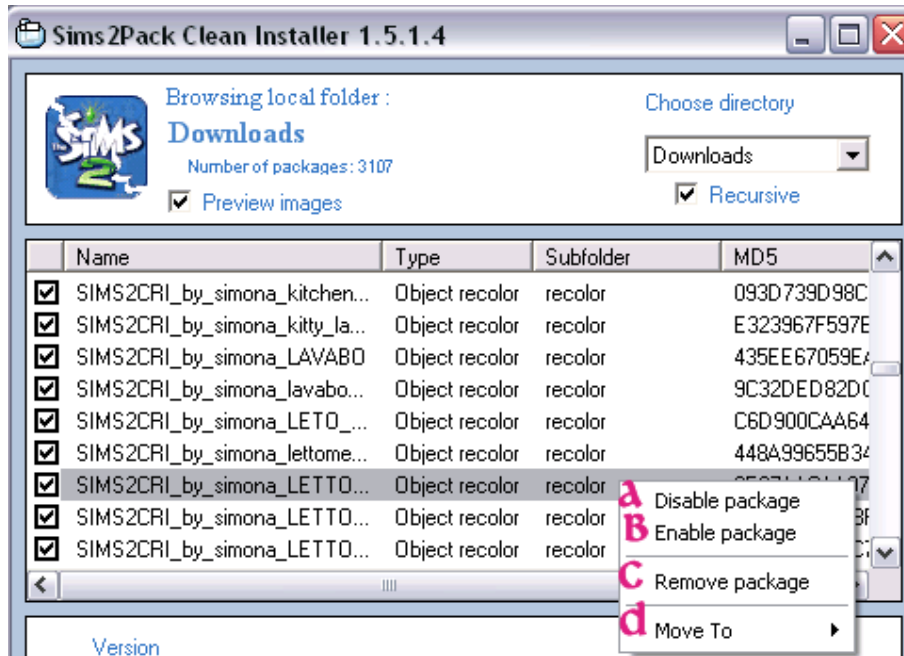

If you want to know the original name of a file, to discover how it is in the downloads folder, you must keep the mouse on the file's row, until you can see a window as in the following image:

1.3 MOVE, DELETE OR DEACTIVATE FILES

You can delete or move files with this program. For delete a file you must simple select it and then press DEL button.

You can also move in subfolder or in other folders the files or deactivate files. If you click the right button of the mouse over a selected row appear this window:

- A. Disable the file
- B. Enable the file
- C. Dolete the file
- D. Move the file on the specified folder

If you want make more clean your download folder you can put in subfolder recolor objects, mesh files, hacked objects, wall, floor, career and game objets.

If you have Nightlife or Open for Business expansion pack installed you can put everything in subfolders.

All the "Empty package" files can be delete. There are no needed, they are corrupt.
